SUMMARY

Applied AI engineer who turns ambiguous workflows into deployed products through customer-focused discovery, full-stack TypeScript/Python delivery, LLM tool integration, evaluation, and cloud operations.

EDUCATION

Northeastern University, San Jose, CA — MS Computer Science (GPA: 4.0/4.0) Sep 2022 – Aug 2025
University of California, Irvine, Irvine, CA — BA Quantitative Economics (GPA: 3.5/4.0) Sep 2015 – Mar 2019

TECHNICAL SKILLS

Core: TypeScript, Python, JavaScript, SQL, React, Next.js, Node.js, FastAPI, Flask, React Native
Applied AI: LLM applications, agent orchestration, tool/API integration, RAG, evaluation, prompt and context engineering, streaming, structured outputs
Cloud & Data: AWS, GCP, Docker, Firebase, PostgreSQL, SQLite, Redis, Elasticsearch, DynamoDB

PROFESSIONAL EXPERIENCE

SiriusMindshare LLC, San Jose, CA Oct 2025 – Present
Machine Learning Engineer | Next.js, TypeScript, AWS, Vercel AI SDK

- Architected and shipped a production multi-agent platform with five specialized agents, each assigned distinct personas, tool access, and memory scope across customer-facing workflows.
- Engineered cache-aware prompt assembly reusing ~4K static tokens per request and a four-stage context compression pipeline triggered at 80% token capacity for reliable long-running sessions.
- Co-developed an LVLM-based retail attention-quality assessment framework; paper accepted for publication and presentation at IEEE CCET 2026 (forthcoming).

1 Thing Against Racism Organization, Remote — Full-Stack Developer Intern Jan – Apr 2025

- Built Flask/GCP APIs, caching, and real-time notifications for the Hate Crime Tracker; integrated social publishing workflows and improved frequent-query response times by 40%.

1 Thing Against Racism Organization, Remote — Full-Stack Developer Intern Jan – Apr 2024

- Delivered React and React Native experiences with Firestore synchronization, OAuth, encryption, and AI-assisted content moderation across iOS and Android.

SELECTED PROJECTS

Agent Hook | Python, Webhooks, SQLite, Claude/Codex CLIs 2026

- Built a local-first trigger layer that turns cron, webhook, GitHub, and filesystem events into bounded agent runs with capability whitelists, retries, approvals, notifications, and audit history.

In-Context Search | Chrome Extension, JavaScript, LLM APIs 2026

- Shipped an extension for select-to-explain and in-page search, combining surrounding-page context with six AI/search providers across inline, side-panel, and context-menu experiences.

AgentFlow | TypeScript, React, Hono, WebSocket 2026

- Delivered a full-stack workflow product with visual graph editing, multi-agent execution, human gates, real-time events, REST/WebSocket APIs, and pluggable LLM backends.

Additional open source: Agent Bridge (sandboxed agent compute) · jsfetch (JS-rendering CLI/MCP) · Kaggle Team (iterative agent team)
